

50, 60 and 80

Pallet Mover Frames

The purpose of our Pallet Mover Frames is to **optimize the pick-up and delivery of pallets**. The frames are designed to be used in combination with our Pallet Movers; PM1500 and PM1548 and are available in different heights (50, 60, 80 mm).

With help of the frames, that are placed in between the mobile robot and our application, the mobile robot will have the same working height as the roller conveyor. This way they enable the pick-up and delivery of pallets and the mobile robots can easily be integrated in existing processes and infrastructures.

KEY BENEFITS

Quick and easy integration

Bring the AMR on the same working height

Easy placement to the AMR and Pallet Mover

Available in three different heights

Optimize pick-up and delivery of pallets
